DISCO2157

DISPATCHER CONSOLE DISCO2157

The Dispatcher Console DISCO2157 is an all-purpose communication working station which enables the control center to communicate through different networks, such as analog radio networks, DMR, TETRA and fixed line telephony. The configurable user interface offers clients high flexibility and a custom-made solution for efficient communication.

Figure: Dispatcher Console DISCO2157

Interdisciplinary collaboration between different organizations has become an important paradigm, which constantly grows in importance. Diversity of communication paths further increase and become even more complex. On the one hand, this leads to advantages with regards to availability of participants or efficient exchange of information. On the other hand, users quickly lose overview of available communication paths and space becomes even more limited.

Dispatcher Console DISCO2157 as solution to the problem

ErvoCom considered these aspects in the development of the Dispatcher Console DISCO2157. This device provides a simple way interdisciplinary communication and combines different communication appliances in one working station. One device for all communication tasks. A simple user operation lies at the center of this product. The self-developed dispatcher interface provides DISCO users with an effective tool for optimal communication towards the various task forces. Voice over IP (VoIP) technology further enables connection of different radio and telephony networks through LAN infrastructure (Ethernet).

With the DISCO2157 it is possible to display graphic information at the work station, depending on the field of application. As an example, with in- an outdoor location applications, current locations of people and vehicles can be displayed on maps or building plans. A separate function allows zooming of image sections.

Advantages

- Intuitive user interface
- Efficient communication in control center thanks to integration of all essential communication technologies in one working station
- Configurable user interface, which is in line with everyday needs
- Multiple user profiles
- Monitoring (listen in) function
- High degree of expandability for new technologies
- Robust hardware components
