REFEREE PAGING SYSTEM RPS2156

The Referee Paging System RPS2156 is an electronic paging system that communicates via radio, from Assistant Referees to the Referee and has been developed in conjunction with referees worldwide. For Referees it means they can focus more on the game, reducing refereeing mistakes. The RPS2156 is the successor to the RPS2056 and benefits from additional haptic feedback to confirm the receipt of messages, setting a higher standard of communication for Referees.

Figure: Referee Paging System RPS2156

How it works

The Referee Paging System RPS2156 provides a data link between flag and pager via radio communication. Hereby now a bi-directional communication method is used. This means as soon the message has been received by the pager the referee gets an immediate acknowledgement. This ensures best possible technical reliability and performance at ongoing football games. In this way any theoretically possible transmission fault can be recognized by the user immediately.

Since each flag now has an own and unique ID various different flags and pagers can be configured within one system. The previously used different color codes are not needed any more. By using the programming mode new and additional flags can be assigned to a pager. The maximum amount of flags is ten.

Signaling

Volume- and tone-adjustments now can be configured onthe flag directly. This has two advantages: First of all there is no need any more to open the pager for configuration. Secondly now every single flag can be configured individually. Hence this makes it easy to efficiently adjust, for instance one flag to a high volume level and another one to a lower volume.

The Referee Paging System RPS2156 is available as:

- RPS2156-2: One Pager and two Flags including carry bag and screwdriver
- RPS2156-3: One Pager and three Flags including carry bag and screwdriver
- RPS2156-5: One Pager and five Flags (2 with short bar stick) including carry bag and screwdriver

We are glad to receive your requests. Please do not hesitate to get in contact with us if you have any queries.

Advantages

- Highest quality standard
- Transmission acknowledgement of messages
- Ergonomic shape of the pager for good user comfort
- Changeable wristband
- Battery check at turn-on
- No interference between different systems, more systems can be used within the same area.
- Automatic shutdown if the pager has not been used for a long time
- Volume adjustment at 3 steps
- 3 different tones, configurable on every single flag
- Freely configurable flags
- Improved battery performance for longer usage
- Freely expandable system
